

## NOTES

1. This schematic design study assumes that a new skate bowl is provided and replaces the street skate plaza of the Preferred Alternative and the existing bowl. This drawing differs from New Skate Bowl Study 1 in placing the bowl farther west and out of the center of the park, but not as close to the property line as the existing bowl.
2. Integration of the new skate bowl would be achieved through moving the amphitheater to the east, enlarging the northern lawn area, relocating most of the play area to the south to accommodate a new bowl with access ramp and a 6-8 foot tall sculptural enclosure for security.
3. The replacement of the street skate plaza with the a skate bowl would require additional time for design. Given the distance of the bowl to adjacent residences, an acoustical engineer may not be required.
4. A skate bowl expands the park program as represented in the Ballard Civic Center Master Plan.
